La Poste testing hydrogen-powered truck

Renault Trucks and the French mail service provider, La Poste, are testing a 4.5 t Maxity electric truck equipped with a hydrogen-powered range extender for the first time in Europe. The equipment boosts the truck's autonomy to 200 km. The vehicle will be tested under actual operating conditions in Dole (France) for a year.

The trial will enable Renault Trucks to explore all potential avenues of hydrogen technology under actual operating conditions. The vehicle generates no noise and only releases water vapour. La Poste owns the world's largest fleet of electric vehicles. (ben)
